

## Compass: Computer-Aided Breast MRI Analysis to Maximize Efficiency and Economics

### Would you recommend your current MRI-CAD system to a colleague?

Systems available on the market today require a five-figure payout each year for support and separately sold upgrades are comparatively expensive; all while providing just a handful of core features that are used the most. Compass computer-aided analysis for breast MRI provides real-time visualization, improved economics and efficiency, and offers flexibility with installation on your own PC. With Compass, upgrades and award-winning product support are included.

### Compass Breast MRI Analysis

- Compass offers the next generation of analysis; real-time processing, customized hanging protocols, morphology visualization and no re-processing. Compass is a software only solution which runs on your hardware.
- Designed by industry leaders using the latest technological advances, Compass can be offered at a competitive price; typically less than the standard MRI CAD service agreement.
- Compass provides every tool needed to efficiently interpret breast MRI studies.

### Efficient, Accurate, Cost Effective Study Processing

For Dr. Gary Wood, Medical Director at Northwest Women's Imaging in Tucson, AZ, the integration of Compass into his practice represented an opportunity to continue delivering a high level of care, increase efficiency and reduce costs.

A long time MRI-CAD user, Dr. Wood realized that true integration of his MRI software had to be accomplished at the PACS – softcopy review. Compass' deep integration into our MIS for clinical data reporting and tracking, as well as our multimodality reading workstation was ideal.

“The move from our existing, free-standing breast MRI-CAD system to Compass has allowed us to be more streamlined and efficient; the process was easy and cost-effective”, said Dr. Wood.

Caution: Federal law restricts this device to sale by or on the order of a physician.

## Compass Breast MRI Analysis

By automating analysis of breast MRI, Compass provides radiologists with the time sensitive information needed to maximize productivity when interpreting and reporting complex studies.

Compass makes economic sense as a software only program – costing tens of thousands less than the typical MRI-CAD system.

### Delivers:

- Enhanced workflow with studies ready to read in just a few moments.
- Reliable way to process all of your studies – no "failures to process."
- Easy to use, intuitive user interface that requires no on-site "super user."
- Real-time, dynamic threshold setting and peak series adjustment that allows for no downtime while study is reprocessed.
- Easy installation; Compass software can be loaded onto any minimum specification PC.
- Complete breast MRI reporting, tracking and practice statistics when integrated with PenRad.
