The Cancer Interoperability (CI) group is a collaboration across all of the diverse specialties of medicine that are involved in the Diagnosis, Treatment and Research efforts related to the entire longitudinal care pathway and workflow experienced by the cancer patient.

Cancer Interoperability group produces Clinical Models, FHIR Profiles, IHE Structured Data Capture Forms (SDC), and decision support guidelines to span across and bridge between all of the diverse medical professionals involved during the journey of patient care.

Cancer Interoperability (CI) group brings the patient perspective into view as they make their journey through their diagnosis and treatments related to cancer.

Treatment assessments and outcomes are key to Cancer Interoperability.
