

# PenForms

Wireless and remote digital patient history and high-risk screening forms

Now your patients can update their information with simple prompts in a “yes” or “no” format that validates their personal and historical data and facilitates screening for those at high risk of developing disease. What’s more, patients can now update all their information including insurance, health history, familial risk and more on any internet enabled device, safely and securely all the while, avoiding full waiting rooms.

## Easy to Use:

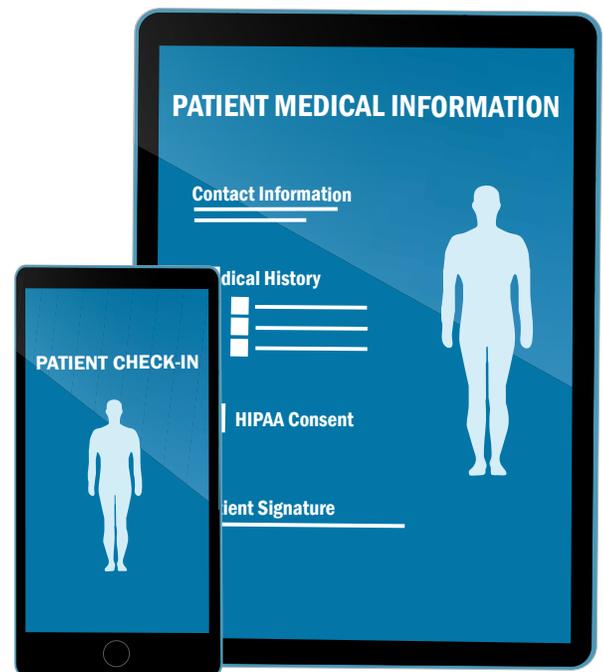

Simply have the patient use their own device, a tablet you provide, or their personal computer to update their information. Patients can also be directed to watch videos, fill out risk surveys (Tyrer Cuzick for example) and be prepared well in advance of traveling to their appointment. What’s more, most facilities are looking for easy, economical ways to facilitate social distancing in light of the current COVID-19 pandemic – PenForms is the solution.

As soon as the patient has completed all of their tasks the data is automatically saved in the permanent PenRad patient record. PenForms eliminates the need for patients and technologists to enter and re-enter data every time they come in for an appointment and keeps everyone safe while following mandated social distancing guidelines as we return to screening activities.

## INTRODUCING:

# PenXpress

PenXpress Check-in allows patients to virtually check into their appointment from the comfort and safety of their own home, using their own digital devices.

Eliminate errors, facilitate education, follow clinic guidelines on patient-caregiver interaction, save time and money with PenForms.
