

PenLung™

LDCT Lung Screening Management System

Low Dose Computed Tomography (LDCT) Lung screening presents a number of challenges for diagnostic imaging centers. Patients must be screened for eligibility requirements and participating centers are required to upload pertinent exam information to a lung cancer screening registry in order to qualify for payment.

PenLung offers facilities a comprehensive unified software solution to manage patients participating in lung screening programs. PenLung provides automated web and tablet calculators to collect smoking and environmental risk history for patient eligibility, as well as facilitates LungRADS™ reporting combinations automating the entire reporting, auditing and lung cancer screening registry upload.

More than a tracking system, PenLung Features:

- Automatic data extraction from report narrative
- Patient letters
- Recall/past due correspondence
- Separate finding profiles
- ACR LungRADS™
- Recommendations and outcomes
- Non-conformance tracking for liability
- Pathology and cancer staging
- Tracking of unresolved cases to resolution
- Extended care navigation
- Statistical audit reporting
- Audit log tracking
- Email ready
- Registry export

To avoid the administrative demands and burdens of your LDCT lung screening program, incorporate PenLung.
