

2019 will be the year...built upon the Series 7 platform being implemented today

PenRad's leadership within the Imaging market has never been predicated on gimmicks, but on our passionate dedication to capturing data, and displaying accurate results.

Soon 2019 will be remembered as the year that PenRad rocked the industry with a cascade of new offerings leveraging popular mobile and web technologies.

For those who have visited PenRad at HIMSS and RSNA, you know that PenRad has been working on next generation speech and NLP based structured reporting solutions that are pure web and mobile based. With PenRad's launch of Series 7, we have cleared the deck to allow our customers to benefit from the fruits of that labor. Series 7 Mobile capabilities can be deployed onto tablets for Patients, and on staff iPhones and Android devices bringing instantaneous communications between team-members and immediate access to schedules and work-ques.

PenRad's "Status Dashboard" for example, displays in a secure workspace, the current status of each patient for the Imaging Technologists, and can be easily accessed remotely by an Administrator. The web-versions of PenRad's Series 7 reporting tools will make locations more productive and dramatically lower support costs.

PenRad has shown a two-decade commitment to the mission critical needs of the breast imaging center, delivering production quality software for breast radiologists and their teams. With the release of the PenRad Series 7 platform, we are looking towards the future to do what we have always done, but with a bit more flair and mobility.

Visit booth #3904 at the 2018 RSNA for more details, as well as solutions for Lung Cancer Screening.
