

## PenRad Launches Series 7 Platform

*Article Courtesy of PenRad*

PenRad's focus has always been driven by our passionate dedication to breast imaging facilities. Our passion expands in 2019 with a cascade of new offerings fueled by our Series 7 Platform, which leverages popular mobile technologies, and HL7 FHIR.

Soon, customers will be able to deploy PenRad solutions on mobile (Apple, Android, tablets and phones). This will be joined by our web-based, highly secure and scalable micro-services platform. Staff members can use phones or tablets to enable instantaneous communications between team members and patients and monitor status of the system and workflow. This next generation offers additional productivity and greater security while dramatically lowering implementation costs.

PenRad now offers a FHIRcast solution for context synchronizing. As the FHIR profiles evolve, PenRad's FHIR solutions will expand to provide solutions for Clinical Decision Support and value-based incentives.

PenRad has also taken a lead in developing the next generation of FHIR standards and guidelines for breast imaging through our work in HL7 and the Cancer-Interoperability Group. 2018 saw the first balloting of breast cancer staging models, and 2019 will expand that work to all modalities of breast radiology.

PenRad has shown a two-decade commitment to the mission critical needs of breast imaging facilities, delivering award-winning software for breast radiologists and their teams. The PenRad Series 7 platform catapults us into a future of additional clinical arenas.

Visit HIMSS19 Booth #4987 for more details as well as solutions for lung cancer screening. Call 763-475-3388, and visit [www.penrad.com](http://www.penrad.com).
