

PenTrac

PenTrac enhances patient care workflow by automating management of patient recalls and reminders, letter generation, exam tracking, statistics and MQSA reports, saving time and money.

PenTrac has the same administrative and report features as our full product PenRad, however the narrative report generation is not activated.

PenTrac can be installed on your server, or use our hosted solution, eliminating the need to purchase, install and maintain hardware and software.

For hosted clients, users connect to PenTrac's secure website by entering their user name and password.

PenTrac tracks all related breast imaging, procedures, pathology, prints and logs all patient letters, and calculates MQSA statistics.

Basic PenTrac workflow:

Technologist or helper collects and updates patient medical and risk factors, and family cancer history. System prints history sheet with known data for returning patients.

When the exam report is available the tracking points are entered, then the patient exam letter with the appropriate breast density statement is printed, completing the exam tracking.

Reminder letters are printed 30 days in advance of next recommended recall date. If patient does not return, a series of past due letters are printed, covering liability.

PenRad

114 Commerce Circle, Buffalo, MN 55313

PenRad.com | sales@penrad.com | 763.475.3388

Tracks all exam types below with sub categories:

Mammo - 2d/tomo - screening/diagnostic - cesm
