PenRad™

The value in our dedicated
mammography information
system integrated within
an EMR/EHR system

PenRad goes beyond mammography reporting. Our products encompass all aspects of discovery, treatment, patient engagement, professional efficiency and structure/flow management.

We work with our customers for the best facility concepts, optimizing productivity, patient engagement, risk reduction, while driving revenue and cost reduction.

PenRad is more than your vendor, we are your partner, and we are invested in the next generation of healthcare reporting and exchange as a CIMI, HL7 FHIR co-chair member.

Investing into the Future

PenRad goes beyond by providing leadership in the standards effort. This includes HL7 workgroups, such as Clinical Interoperability Modeling Initiative (CIMI), and the Cancer-Interoperability project supported by the ONC, FDA, CDC, NCI, NIH and RSNA.

PenRad continues investing within the breast community along with driving benefits for the future in diagnostic technology, techniques and analysis. We also support the industry through sponsoring and attending breast conferences and trade shows.

All this and more offers our customers advance access to future technologies.

Our Monetary Value

Many EMRs state PenRad as an unnecessary expense, promoting their “no-cost” mammo system.

However, no monetary value is given for productivity gains, our clinical knowledge, our first line support, and our upgrades with the newest requirements, terminology and analytics.

How about a no cost support staff, and consultants for custom reports, problem solving, updating and maintaining the software?

PenRad Empowers You

The all-in-one EMR has it's benefits, however, breast facilities are best served with PenRad technology, for optimization of staff, research and patient engagement.

With a growing shortage of radiologists, technologists, and IT staff, our products offer productivity and financial gains, and many other benefits not fully recognized.

PenRad is the clear choice

Simply stated, there is a high cost for NOT having a dedicated mammography solution integrated with an EMR/EHR.

Example, the high cost for support staff, and consultants for custom reports, problem solving, updating and maintaining the software.

Plus, your important cancer research data automatically collected by PenRad, would be lost to “free text” in their solution.

Not having a dedicated program will invoke financial burdens of unknown proportions. Ask yourself, will EMR's ever exceed your staffs expectations?
